Open discussions.

Question 1 17 pts

An ice skater is spinning her arms extended. If she brings the arms in,

its random

she will spin slower

she will keep the same spin rate

She will spin faster

Question 2 17 pts

we emit _____ radiation

radio waves

infra red

UV

we do not emit radiation

Question 3 17 pts

When a fluid flows through a constricted passage (plaque in aortae) , it accelerates and the pressure in this constricted part

hint: slide 7 (Bernouilli principle)

☐

decreases

☐

instreases

☐

stays the same

☐

there is no pressure involved

Question 4 17 pts

In the Northern hemisphere, if you shoot cannon ball along a straight line, in your rotating frame of reference (earth) , the cannon ball will appear to

(see slide 1)

☐

oscillate

☐

be deflected @ left

☐

be deflected @ right

☐

it will not be deflected

Question 5 17 pts

If a textbook and a paper are dropped from the same height, on the Moon (no air)

☐

the paper reaches the ground first

☐

it depends on the title of the book

☐

the book reaches the ground first

☐

they reach the ground at the same time

Question 6 17 pts

A tennis ball is thrown with a top spin. (action reaction at work. see slide)

the ball is

☐

deflected downward

☐

you can't make a tennis ball spin

☐

deflected upward

☐

not deflected

Question 7 4 pts

bonus.

you are like a 100W light. Losing the same amount of energy per second. But you are not burning hot. because

☐

your surface area is larger

☐

its not the same type of energy

☐

you have big ears

☐

your fuel is not electricity
